Section 2

Like Section 1, slow moving throughout, containing bream, perch and roach. There are also some large pike and carp. During winter chub are caught as well. This section tends to fish better in the colder months.

Section 2 on the Chippenham Angling Club waters is very similar to Section 1. It's a deep, slow-moving stretch of the Bristol Avon that suits anglers targeting silver fish as well as larger predators.

What you can catch
Bream, Perch, Roach, Pike, Carp, Chub - mainly during the winter when the river carries more flow.

The water is generally 10-12 feet deep with a slow, steady flow, making it ideal for feeder and float fishing.

Best methods Roach & perch
• Fish a stick or waggler float if the river is steady.
• On deeper pegs, a small cage feeder works well.
• Baits: maggots, casters, worms and hemp.

Bream
• Method or open-end feeder.
• Feed little and often with groundbait and particles.
• Hook baits: double maggot, worm or sweetcorn.
• Best at dawn, dusk or after dark.

Pike (autumn and winter)
• Deadbaiting is the traditional approach.
• Remember that livebaiting is prohibited on Chippenham AC waters.

Winter chub
• Fish a link ledger or feeder close to cover.
• Bread, cheese paste, worms or luncheon meat are reliable winter baits.
